

26 March 2014

## **Community rolling action plan (CoRAP) update covering years 2014, 2015 and 2016**

The CoRAP update for years 2014 – 2016 lists 120 substances for evaluation by the Member State Competent Authorities under the substance evaluation process of the REACH Regulation (EC) No 1907/2006 (Articles 44 to 48). The plan contains 53 newly allocated substances and 67 substances as already published in the previous CoRAP on 20 March 2013. The substances are distributed for evaluation in years 2014, 2015 and 2016 between 21 Member States. 51 substances<sup>1</sup> are being evaluated in 2014 by 20 Member States. In 2015 and 2016 the aim is to evaluate at least 48 and 21 substances, respectively. However, by the end of March 2015 this plan is going to be updated again and changes may be introduced for the substances in years 2015 and 2016 (Article 44(2) of the REACH Regulation). Also new substances may be added for those years.

The CoRAP update has been prepared in close cooperation with the Member States, taking into account the criteria for selection of substances<sup>2</sup>. A draft CoRAP was submitted on 24 October 2013 to the Member States for their opinion and the draft was also published on the ECHA website on 4 November 2013. ECHA published this CoRAP update on 26 March 2014 on the basis of the opinion of the Member State Committee (MSC) that was taken on 6 February 2014. Some of the substances included in the draft CoRAP update for years 2014 – 2016 have been withdrawn from the adopted list based on the request of evaluating Member State and the opinion of the MSC.

### **Initial grounds for concern**

The plan contains substances for which there is a suspicion that their manufacture and/or use could pose risks to human health or the environment. Substance evaluation under REACH aims at clarifying such potential risks.

In the CoRAP update the grounds for the initial concern that triggered the selection of substances for evaluation are briefly described. Also, the concerns per substance are explained in more detail in the related justification documents available in the dynamic CoRAP table published on ECHA website. In many cases the initial concerns are related to PBT<sup>3</sup>-properties, suspected endocrine disruption, or carcinogenic, mutagenic and/or reprotoxic properties in combination with wide dispersive use or consumer uses. In general, the uses of these substances cover various areas and are not focussed on any particular industrial, professional or consumer uses. The indication of the initial grounds for concern does not limit the evaluation made by the Member States, since the Member States may also focus

---

<sup>1</sup> Covered by 50 CoRAP entries as in one case one entry covers two substances

<sup>2</sup> Selection criteria to prioritise substances for Substance Evaluation (2011 CoRAP selection criteria) [http://echa.europa.eu/doc/reach/evaluation/background\\_doc\\_criteria\\_ed\\_32\\_2011.pdf](http://echa.europa.eu/doc/reach/evaluation/background_doc_criteria_ed_32_2011.pdf)

<sup>3</sup> PBT: Persistent, Bioaccumulative and Toxic

their assessment into other concern areas they find relevant during the evaluation.

### **Interaction with Registrants**

In the CoRAP update the contact information of the Member State Competent Authority is provided for each substance to facilitate interaction of the registrants with the evaluating Member State. ECHA encourages the Member States and registrants to have dialogues in order to clarify any concerns related to the substances. This applies to all substances on the CoRAP, but in particular, this is important for the substances to be evaluated in 2014.

### **Evaluation process**

The designated Member States have 12 months to evaluate substances specified for 2014 starting from the date of publication of this CoRAP update. Where necessary, Member States will prepare a draft decision for requesting any relevant further information to clarify the suspected risks. The first draft decisions for the substances listed in 2014 need to be submitted to ECHA by 26 March 2015. ECHA will forward any draft decisions to the registrants for comments without undue delay. Draft decisions will also be reviewed by the other Member States and ECHA. If proposals for amendment are made, the MSC is also involved in decision-making before the decision becomes effective. In cases of unanimous agreement in MSC ECHA will take the final decision; otherwise the decision will be taken by the European Commission.

## **Community rolling action plan (CoRAP) update covering years 2014, 2015 and 2016**

This document contains the Community rolling action plan (CoRAP) update, a list of 120 substances which are scheduled to be evaluated in years 2014-2016. Furthermore, it contains the names of the evaluating Member States with contact details and the indication of the initial grounds for concern.

- The substance public name is used. In most of the cases it is the name disseminated on the ECHA website.
- Where two Member States are indicated, this is a joint evaluation. The first Member State mentioned leads the evaluation and is the responsible competent authority in the meaning of Article 45(2) of REACH.
- When the EC Number is not available, the number assigned to substances by ECHA after the inquiry process is used.
- When the substances are included in the CoRAP, they have not yet been evaluated and thus the initial grounds for concern are indicative and not exhaustive or conclusive.

### Legend:

- Suspected PBT/vPvB: Potentially Persistent, Bioaccumulative and Toxic/very Persistent and very Bioaccumulative.
- CMR: generic term for known carcinogenic and/or mutagenic and/or reprotoxic properties (according to CLP harmonised or registrant self-classification or CLP Inventory). The substance related justification document describes whether the concern is on C, M, R or a combination of those.
- Suspected CMR: generic term for suspected carcinogenic and/or mutagenic and/or reprotoxic properties (not classified according to CLP harmonised or registrant self-classification). The substance related justification document describes whether the concern is on (suspected) C, M, R or a combination of those.
- Sensitiser: generic term for known sensitising properties (according to CLP harmonised or registrant self-classification or CLP Inventory). The substance related justification document describes further the identified concerns.
- Suspected sensitiser: generic term for suspected sensitising properties (not classified according to CLP harmonised or registrant self-classification). The substance related justification document describes further the identified concerns.
